

Isothermal ($\gamma = 1$): all runs fragment (100 per cent)

Adiabatic heating suppresses fragmentation

Adiabatic ($\gamma = 5/3$)

0 / 30 runs fragmented

all timed out at $t > 30\text{--}40 t_j$

Figure 6. EOS sensitivity: isothermal ($\gamma = 1$, 100 per cent frag.) vs adiabatic ($\gamma = 5/3$, 0 per cent)
